

Longwood to Lakeshore Project Project Update – June 2023

Thank you for taking a few minutes to read about our progress on the Longwood to Lakeshore Project. We know this is a busy time out in the fields for many of you!

Info gathering and field studies continue...on the ground and from overhead

As Hydro One continues to study the different routes, we will be doing aerial survey work in June. During this time, you may see a helicopter flying overhead to survey ground elevation, vegetation, roads and utility infrastructure among other items to help gather information about design and clearance constraints.

We are also continuing with other natural environment field studies, including for example surveys seeking information on the presence of migratory birds, amphibians, aquatic species, and different vegetation communities. Many people have shared details about their properties and even invited us to visit. All of this supports a robust evaluation of the routes and ensures it considers local perspectives and information.

Thank you for your input

More than 700 people joined us at the community open houses and many, many others participated in our virtual open house or shared comments through email or the interactive map. Materials and recordings are available on the [project website](#), under public consultation documents.

Your input is helping us learn more about the local area and how we can minimize the effects of the project on communities, the natural environment and individual properties. Hydro One is committed to addressing your questions and concerns to the best of our ability, and we look forward to more opportunities to continue the conversation.

Please stay in touch

Should you have any questions or wish to provide further feedback, please do not hesitate to contact us at:
